

WHY IPADS IN THE CLASSROOM?

One Device, Multiple Uses

The iPad is a truly multi-functional device, acting as a camera, web browser, communicator, word processor, musical instrument, and assessment tool, just to name a few. Replacing these items with one versatile device saves money and time.

Create and Communicate

21st Century learning is not about consuming information, but rather locating it, evaluating, synthesizing it, and communicating it. The iPad is a multi-faceted device that allows discovery, creation, and communication.

Intuitive and User-Friendly

The iPad and its operating system were designed with ease of use in mind. It is a completely intuitive experience for individuals of any age, allowing for more time to be spent on learning content and less on learning the technology.

Personalized Learning

Modern education is all about creating a personalized learning experience for each student. The iPad's capabilities make it the perfect tool for creating a differentiated learning environment in which the teacher no longer dominates instruction.

24/7 Classroom

Learning is becoming an activity that largely takes place beyond the classroom walls. Harnessing the power of the Internet, the iPad allows the discussions, activities, and learning experiences to continue at all hours and from virtually any location.

Quick and Dependable

The iPad is up and running with the tap of a button. There is no boot up or shut down time, meaning instructional periods can actually be spent on instruction. And the all-day battery life means no frantic search for power cords during the class.
